What is Univents?

Univents is a smart **event communication platform** designed for Taibah University. It solves the problem of **scattered** and **unorganized** event announcements by providing **one centralized**, easy-to-use **system**. With Univents, students can discover upcoming university events, get real-time updates, and register with ease. **Organizers** can also post event details, manage participation, and connect directly with students. The platform helps build a **more connected**, active, and engaging campus life.

Similar Platforms

CampusGroups

modern campus

A platform that helps universities bring student life online. It makes it easy for students to **join clubs**, **find** and **register** for **events**, and stay **in the loop**. All through **one organized space**.

Targeted Audience

University Marketing & Communications Teams → Personalized website content, **automate communications**, and **boost student enrollment**.

Continuing Education & Enrollment Services → Manage non-traditional programs, **short courses**, and **registration**

Involve

CampusGroups by READY Education

Designed to boost student engagement, Involve helps schools **track attendance**, **promote events**, and measure how involved students are **outside the classroom**, making it easier to support their **growth and success**.

Targeted Audience

Student Affairs & Engagement Departments → Manage **student clubs**, events, orientation, and **engagement analytics**.

University Student Organizations & Leaders → **Schedule events**, **track** participation, and **communicate** with members.

ANALYSIS

PROBLEM DEFINITION

The current system of event announcements has room for improvement, as it may not always convey information as clearly or conveniently as it could.

It can be a bit challenging to find the necessary information and announcements easily within the current system.

Events may not have the same impact when students aren't properly informed, which can lead to fewer people attending and missing out.

PROJECT OBJECTIVES

Make event information easier to find and access.

Improve how clearly and quickly announcements are shared.

Increase student awareness to boost event attendance.

PROJECT SCOPE

Students, to increase awareness and participation

Teachers, to easily share academic and extracurricular opportunities.

Organizers, to enhance events/workshops management and announcements

PROJECT TIMELINE

1

First Month, Identify and Research the Idea

2

Second Month, Formed teams, designed flowchart, and styled main pages.

3

Third Month, Researched similar platforms, analyzed features, and defined requirements.

4

Next Semester, Developed backend, integrated AI assistant, and developed features.

5

End of the Semester, Completed final testing, lunch and gather Users feedback

METHODOLOGY

Water Fall

- **Reasearch** → Evaluate current platforms
- **Design** → Create User-Friendly Webpage
- **Develop** → Build the Page with Features
- **Testing** → Test the Platform With Students
- **Launch** → Launch and collect Feedback

What is Next?

Collect Feedback: Gather user feedback to understand what's working and what needs improvement.

Add New Features: consider adding features like notifications, event reminders, or integration with university systems.

Scale Up: Expand the system to support more users, different departments, or even other campuses if successful.

Maintenance & Support: Provide ongoing technical support, updates, and content moderation to keep the platform relevant and secure.

Measure Impact: Analyze data like attendance rates and event reach to evaluate the system's effectiveness.

Ensure Long-Term Sustainability: Establish a plan for continuous updates, team roles, and potential funding or university support to keep the system running effectively over time.

THANK YOU
